

BODYWORKS

Basic Skills Modules

The additional basic skills modules* for BodyWorks 4.0 provide a guided learning pathway for novices to develop probe manipulation, hand-eye coordination, and ultrasound image interpretation in a safe, supportive environment.

Probe Manipulation

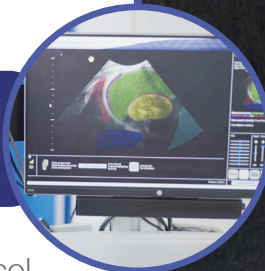

Learn ultrasound terminology, probe manipulation techniques, and the relationship between probe movements and image acquisition, through simple, step-by-step lessons and tasks.

Anatomy Viewer

Understand how the ultrasound image correlates to the main anatomical structures. Explore sono-anatomy by slicing through the virtual body to see how this correlates to the ultrasound image in real-time.

Scanning Windows

Build confidence in PoCUS protocol scanning windows for Cardiac, Lung, Abdomen and Pelvis, IVC and Aorta, and study the relevant sono-anatomy with simple colour-coded highlighting.

*Basic skills modules not available in the US.
