## HEARTWORKS<sup>®</sup> | START 2.0

The new HeartWorks Student Training Assessment and Review Tool (START) completes the HeartWorks learning pathway, providing the ability to assess proficiency in cardiac anatomy, echocardiography, and even diagnostic capabilities.

With an improved student workflow, START 2.0 includes 23 pre-built tests ranging from ventricular function assessment to evaluation of cardiac valves, as well as focused protocols and comprehensive echo studies. Tutors may use any of the pre-built tests or generate user specific assessments to allocate to their students.

Theoretical echo knowledge and quantification techniques can be tested alongside image acquisition skills to provide a comprehensive assessment of a student's progress. The tutor can track the progression of students, review and mark submitted tests, view captured clips and highlight areas for improvement for the whole class, or individual students.
